

CONVOTIS-10-steps-plan

Increase security level easily

1. AD clean up

- User management via tools and HR
- Passwort management
- Admins, accounts

2. Multifactor authentication

Is it really the person who has logged on to the system?

3. Conditional access

Access is linked to defined conditions (e.g. access only from Austria)

4. Endpoint & mobile device management

Intunes replaces CASE and manages all devices

5. Mail security & endpoint security

- Sandboxing
- URL
- Dynamic mail delivery
- Reputation blocking
- etc.

6. Employee awareness trainings

All employees receive regular training.

7. Business e-mail compromise

97% of all attacks start with focus on persons, human errors or insiders.

8. Darktrace

Detect network anomalies.

9. Information protection

Label, classify and encrypt DLP documents.

10. SIEM & SOC

A security service center monitors all activities.
