

## CONVOTIS and Parashift announce strategic partnership for sovereign AI in Document Management

Bergisch-Gladbach/Sissach, 22.04.2026 -The European IT service provider CONVOTIS and the AI company Parashift announce their strategic partnership. The aim of the collaboration is to establish Intelligent Document Processing (IDP) as a scalable, sovereign AI solution in European enterprises and to efficiently automate document-based business processes. Initial joint customer projects are already underway.

*"The use of artificial intelligence is increasingly becoming a decisive factor in the evolution of business processes across European enterprises. It is critical that these technologies are controlled, integrated and operated within clearly defined frameworks. With Parashift, we are specifically strengthening our ability to integrate sovereign AI solutions into existing system landscapes and to transfer them into structured operations,"* explains José Lopez, Group CEO of CONVOTIS.

### Focus on mid-sized and large enterprises as well as supply chain processes

For CONVOTIS, Intelligent Document Processing (IDP) is a key growth area within Data & AI. Through the integration of the Parashift platform, companies gain access to a powerful technology for the automated processing of complex document structures that meets European data protection requirements and compliance regulations.

The focus is particularly on mid-sized and large enterprises with complex, document-driven processes. A special emphasis is placed on supply chain scenarios, where the reliable processing of freight, customs and transaction documents plays a central role in ensuring stable operations.

*"Intelligent Document Processing is a strategic topic for us. With Parashift, we are expanding our portfolio with a technology that can be directly integrated into existing processes and delivers clear operational value, especially in supply chain scenarios,"* adds Jonas Schumacher, Senior Business & Partner Development Manager, CONVOTIS.

An additional advantage arises from the integration into existing document management and content services environments, where Parashift solutions can be seamlessly integrated and operated by CONVOTIS.

## Efficient document processing in global supply chains

In globally connected supply chains, the structured processing of documents is a critical factor for stable operations. Manual processing, lack of standardization and inconsistent data lead to delays and increase operational effort.

By using AI-based document processing, these processes can be automated and standardized. Companies benefit from reduced processing times, consistent data quality and greater transparency across the entire process chain.

Parashift contributes extensive experience from existing customer projects in the European market. CONVOTIS complements this technology with integration, operations and architecture design to sustainably embed the solutions into existing system landscapes.

## Sovereign AI as part of modern IT architectures

The partnership specifically addresses the growing demand for European, data protection-compliant AI applications. Companies gain access to solutions that can be integrated into controlled operating models and meet requirements for data sovereignty, compliance and transparency.

CONVOTIS takes over the integration into existing system and process landscapes and, if required, the operation within sovereign cloud environments.

*"We are already strongly represented in the European mid-market and enterprise segment. Through this partnership with CONVOTIS, we can further expand our reach and provide this target group with our AI solutions even faster. The demand for sovereign European AI is growing rapidly, and our joint focus on complex supply chain scenarios directly addresses current market needs,"* says Alain Veuve, CEO of Parashift.

## About Parashift

Parashift is an AI company founded in 2018 and based in Sissach. It specializes in autonomous Intelligent Document Processing (IDP). With AI technologies, Parashift enables mid-sized and large enterprises to automate document processes with high precision and in compliance with data protection requirements.

Analysts such as QKS, InfoSource and Everest rank Parashift among the global leading providers in the field of AI-based document processing.

## About CONVOTIS

CONVOTIS is a leading IT company in Europe with more than 1,000 employees across 14 locations in five countries. The company has extensive expertise in designing scalable architectures, enabling digital sovereignty and delivering intelligent system solutions.

CONVOTIS develops modern platforms, operates high-performance cloud infrastructures and delivers integrated security and AI solutions for enterprises and public sector organizations aiming to align their systems in a sustainable, compliant and future-ready way.

The portfolio includes Digital Transformation, Data & AI, Cloud Solutions and Security Services – from development and optimization to secure and efficient operation of digital systems. Under the guiding principle “For Europe’s digital future”, CONVOTIS is building the foundation for a sovereign and technologically advanced digital landscape in Europe.
